2. Data

a. Data Resources

b .Data Analysis

3. Results

4. Conclusion and Recommendations

Business Problem

The goal of this project is to analyze data needed by Microsoft to help them creating a movie studio and produce a movie that hits the box office.

Problem

- Create a movie studio.

- Produce a movie hits the box office

Solution

- Calculate the most effective factors on box office profits.

Data

The data is collected from the most popular websites for Movies rating.

➢ **IMdb**

   146,144 films from (2010-2021)

➢ **Rottentomatoes**

   1560 films from (1971 -2018)

➢ **Box Office Mojo**

   3387 films from (1970 - 2018)

➢ **The numbers**

   5782 films from   (1915-2020)

➢ **Themoviedb**

   26516 films from (1930-2020)

Data Analysis

Measure Movie's Grossing by testing 3 factors affecting the movie's revenues.

Estimation of box office profits per movie's genre.

Relationship between Movie's Production budget and Movies grossing.

Box office profits based on Movie's release month.

Methods

➢ Preparing the data (load,clean,join).

➢ Using statistical calculation to determine the factors can increase the box office revenues.

➢ Visual analysis to interpret the statistical
